Accessible cytology screenings to help increase compliance

Vetscan Imagyst® quickly and reliably identifies cells suggestive of cancer in common lymph node and subcutaneous masses

1

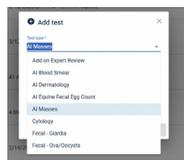

Prepare Slide

- Prepare a masses slide with a Romanowsky-type stain. One slide per submission.
- Add sample to slide area that is not frosted
- Include a label to identify the patient
- Add immersion oil and place a 24 x 60 mm coverslip on top

2

Add New test

- Log in to Vetscan Imagyst
- Choose test and select **SCAN**
- Sample information will prepopulate from any HUB/FUSE connected software system
- If no integration is available, select **Add New Test (+)**
- Enter information and then click **SCAN/CREATE**

3

Complete Sample information

- Enter the Site Name, Preparation Type and Body Region

4

Scan Slide

- Select an available scanner
- Select **OPEN TRAY** and unlock the slide holder
- Place the slide in the tray with the label toward the right
- Close the locking mechanism

5

Create Scan area

- Select **PREVIEW** and review the suggested scan area
- Accept the suggested scan area, or create a custom scan area
- Select **CONTINUE**, then **CLOSE**

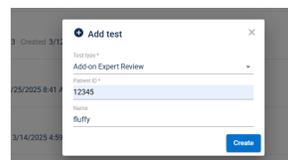

6

Review Test

- Find your test and select **REVIEW**
- **FINALIZE** the report to move it to **TEST HISTORY**
- Select **VIEW REPORT** to access the PDF for download or print
- Submit results for additional pathologist review, if needed (see Add-On Expert Review)

Add-on Expert Review* (Optional; up to 3 additional slides)

- Select **Add New Test (+)**
- Choose the sample
- Attach history documents (.pdf) or photos (.jpeg)
- Select **CLOSE**, then **SUBMIT ORDER**
- Find the desired tests and select **REVIEW**

Incomplete Tests

- An incomplete or unsubmitted test will display an **Incomplete Test Order** status in the Inbox
- Select **OPEN** to complete all required fields
- Review steps 3-6

* Additional costs may apply. Contact your Zoetis representative for assistance.
